

Ecology Team Consultation Response	
Date:	19.08.2026
Planning Ref:	4/26/2261/0F1
Description:	Addition of pitched roofs to flat roof dormers on west elevation.

The County Ecologist accepts the method of works given by email form on 19.08.26 and suggests the following planning condition, given the lack of optimal foraging or roosting habitat available to bats in the near vicinity.

Suggested Planning Condition

Breeding Birds

Works should be completed outside of the breeding bird period (March – August inclusive). If this is not possible a breeding bird check should be carried out no more than 48 hours prior to the planned development to ensure no birds and their nests are present within habitat/buildings that may be directly or indirectly impacted. If active nests are discovered an appropriate buffer zone should be established and works within that area ceased until the young have naturally fledged.
