Dear Sir / Madam,

I have been advised by a tree surgeon that one of the trees in our garden has a disease called Ash dieback, this can cause many problems within in the surrounding wooded area, the advice is to get the tree felled ASAP due to the fact if left much longer the tree will become too dangerous to even climb, the branches will become to brittle to take any weight.

I would like permission to have this tree felled as it has a tree preservation order placed on it,
I would like this done as a matter of urgency, even though the cost to myself will be quite a lot of money.

The tree could cause problems to the residents of the old folks home (Johnson House) it also causes a problem To our neighbours on Woodlands Avenue (Mr & Mrs Colin O. Hare) they have a log cabin in their garden, Branches from the tree if fell, could go through the roof of the cabin.

Please find enclosed information regarding the felling of this tree, if your require anymore information please get in touch.

If you would prefer to have a look at the problem, we could arrange a date to investigate and make a decision

Yours Sincerely.

Barry Ackerley.
